Placement Activity Points

In response to valuable feedback from our industry partners, the Industry Interaction Cell (IIC) has identified a key area for student growth. While our BS program students possess strong fundamentals, partners have highlighted a need for greater hands-on, practical skills. To bridge this gap, the IIC, in collaboration with the academic unit, has developed a set of industry-relevant activities aligned with our diploma-level courses.

The IIC provides dedicated support for internships (for students with at least one diploma) and placements (for students with a BSc degree). To prepare students for these opportunities, we offer structured three-level training that covers professional skills (Levels 1 & 2) and deep technical knowledge (Level 3).

To directly address industry needs and boost employment readiness, we are revising the **"Activity Points" scheme**. By completing designated tasks, students earn points that will be a key criterion for receiving placement support. These activities are organized into targeted learning paths—**Common, Data Science, and Software Development**—ensuring students are thoroughly prepared for the technical evaluations in their chosen domain.

Internship & Placement Activity Points System: How it Works

Multiple activities have been identified for internships and placements in the **Data Science** and **Software Development** domains. Students must complete these activities to accrue **Activity Points**. The points awarded vary depending on the course, difficulty level, and estimated effort required.

1. Common Mandatory Activities (Table 1)

- These are mandatory for **both internships and placements** in both domains.
- **Total Points Available**: 15
- **Minimum Required**:10

2. Internship-Specific Mandatory Activities

- Separate activities are identified for **Software Development** (Table 2.1) and **Data Science** (Table 2.2).
- **Total Points Available**: 25
- **Minimum Required**: 15
- **Eligibility Requirement**:

- To qualify for internships, a student must earn a **minimum of 25 points combined** from **Table 1 and Table 2**.

3. Placement-Specific Mandatory Activities

- Separate activities are identified for **Software Development** (Table 3.1) and **Data Science** (Table 3.2).
- **Total Points Available**: 40
- **Minimum Required**: 25
- **Eligibility Requirement**:
  - To qualify for placements, a student must earn a **minimum of 50 points combined** from **Table 1, Table 2, and Table 3**.

This structure ensures:

- **Table 1** → Mandatory for *everyone*.
- **Table 2** → Mandatory for *internships*.
- **Table 3** → Mandatory for *placements*.
- Progression: Internship eligibility at **25 points**, Placement eligibility at **50 points**.

Students are required to update the activities completed once in a term through forms sent by the IIC team

The activity points will have a validity period of one year from the activity completion date

Students will have to accrue these mandatory activity points to become eligible for final One-on-One sessions with the examiners.

Each of these activities are done on public platforms so that there is better visibility on the credentials obtained by the student.

Where you can access this information:

Details are given in this document and also will be available in your Student Dashboard under Latest Updates. This will be made available in all the new course pages & Student Handbook soon.

Tracking Progress:

To ensure transparency and motivation, students will be able to track their progress regularly. We will provide a submission portal where students have to log completed activities to add to their overall performance. This will be monitored by the IIC team.

The “Placement Activity Points” scheme is meant to encourage students to actively engage in the practical application aspect of studies to enable them to perform better in technical tests during interviews and be more equipped and confident professionals in the future.

FAQ - Click here

Github Repo Link: We have added the “**Ultimate Tech Interview Question Bank**” GitHub repository as an additional learning resource. It contains curated interview preparation materials for Data Science, AI/ML, Programming, SQL, Linux, DevOps, and Software Development roles, along with coding and problem-solving practice questions. Students are encouraged to make use of this repository for interview preparation and skill development.

For clarifications, please write to **iic@study.iitm.ac.in**

Table 1: Common Mandatory Activity Points for both Internships and Placements in both Data Science and Software Development domains

Topic	Activity Document	Activity Title	Activity Description	Activity Points		Link for Update
Database Management Systems	DBM…	DBMS Easy	SQL Basic Certification Skills (HackerRank)			**Master Form**
		DBMS Intermediate	SQL Intermediate Certification Skills	1		
		DBMS Advanced	Advanced Certification - HackerRank	2		
Programming, Data Structures	PDSA1	PDSA Tasks Easy	20 Easy Level Questions - Leetcode			

and Algorithms using Python		PDSA Tasks Medium	25 Intermediate Level Questions - Leetcode	2		
		PDSA Tasks Hard	10 Advanced Level Questions - Leetcode	4		
System Commands	VM Task - Solve VMT1.x series	Practice from these links	https://www.hackerrank.com/domains/shell https://www.hackerrank.com/challenges/bash-tutorials---arithmetic-operations/problem https://www.hackerrank.com/challenges/text-processing-in-linux-the-grep-command-1/ https://www.hackerrank.com/challenges/text-processing-in-linux-the-sed-command-1/problem https://www.hackerrank.com/challenges/awk-1/problem	3
